

Editor's Comment:

This manuscript describes a Treatment of Port Harcourt refinery effluent by a bacterial consortium immobilized on agro-based biocarriers. The subject is very interesting as well as the scientific content is very impressive for environmental community; the use of bacterial consortium appears very significant which can employed as bioremediation as ecosystem friendly. I think that this work is publishable with a minor revision.

- Some Simple grammar and syntax error must be corrected;
- The author has not given any pH value. What was pH of sample pl explain about pH level also. As given in line no 124 and 125
- The symbols and abbreviation in table 2 should be well from SEM pl explain in details in results and discussion text
- Where is the A and B in figure 1, must be noted

Which modern method the author has used

The conclusion should be informative and which can show all out comes
