

**Editor's Comment:**

Authors made the corrections requested by reviewers. Nevertheless, I added more requests for authors that must be met.

One of the reviewers requested for the ethical clearance for research with human subjects. Authors added the information in the manuscript: "*An informed consents was obtained from each participant of the study. The potential benefits and risk involved (if any) were fully explained to the study subjects.*" I'm not sure if this information is enough for the AJEE. Please, check it.

In the feedback, authors said "*The prove of the ethical clearance was attached and sent along the updated version of the manuscript*", but I did not receive the attachment.

The manuscript has no in-depth scientific discussion and no scientific innovation. It is informational only. However, it has environmental and public health relevance, so after the authors make all the corrections I requested, the paper can be considered for publication. But it is essential that all corrections are made. I would like to review again after their corrections.

I attach the article with my corrections.
