

Editor's Comment:

The paper work very good. But the writing part should be take it into very serious and sincere. There are many mistakes in the paper.

1. Should check the alignment.

2. DEXA body composition parameters (Loftinet al, 2007 clinical sitting (Pietrobelli et al, 1998). The references while indicating in the text, should follow the uniform order, et al., should be italic.

This is just a example, kindly, the author should be rework regarding the writing part and then submit. after the revision only i suggest that to accept the paper and could publish later in our journal.
