

**Editor's Comment:**

After analyzing the submitted documents, I suggest that the authors be informative amis in their feedback to the reviewers' criticisms. Saying "OK" isn't enough. On the other hand, it would be important for the reviewers to validate the changes made by the authors because I detected some questions that remain incorrect, for example, the keywords remain incorrect and the list of bibliography that was incomplete according to the reviewer Graziela Ribeiro, further reduced in the revised version of the article.
