

**Editor's Comment:**

Thank you for considering as a editorial decision for the manuscript entitled "**SOIL MECHANICAL COMPOSITION AND TEXTURE AS INDICES FOR ON-SITE AND FIELD PRECISE CHOICE OF LAND USE TYPE TO ADOPT**"<sup>1</sup> thoroughly went through the manuscript, reviewers report and author feedback/ comments. I suggested some important points here for the benefits of Manuscript.

1. Abstract should be thick with proper layout and alignment as per journal format.
2. There is no need to insert table number in the introduction section.
3. Conclusion must be in concrete form.
4. It can be accepted after revision provided authors must be compliant with all the corrections/suggestions.
5. All the sections of the manuscript must be justified and proper alignment as per journal format.
