

Editor's Comment:

I have read the revised manuscript and below you can see my remarks

1. the authors responded well to my suggestions but Table 3 is not informative. Which growth parameter is this Table for? It cannot be for all the parameters measured, since the analysis is done for each one separately.
2. There is no need to use so many decimals in the values reported. For example, how could anyone measure 5,600 ml of volume? I mean how could the authors measure with accuracy volumes in the range of μ l?
3. Table 5 has a problem with the lettering of the statistical analysis and there is no footnote explaining the letters. Please correct it.

I believe that after making all the necessary changes the manuscript can be accepted for publication.
