

**Editor's Comment:**

I very carefully went through the comments raised by the diligent reviewers on revised MS entitled “**Heavy Mineral composition of Himalayan Neogene Sediments occurring along the Garu-Likabali road section, Arunachal Pradesh, India**” and spot out that the author's did not respond to some comments. I ask authors to do the following comments raised by the referees before the article can be considered for publication in **Journal of Geography, Environment and Earth Science International**

**Main points to consider**

- The authors did not state descriptive including the novelties of the work in the Introduction section as raised by the reviewer. Recent references MUST be added to this section as well.
- I do agree with the reviewers to add the chemical formula of each mineral to make it clear for the readership.
- The citation of references in the text were not correct, please, add it in serial number and correct that in references section (not alphabetical). Check the journal Guide for authors for more details
- Where is the mineralogical analysis of each mineral by XRF or XRD as the raised by the reviewer?
-
