

Editor's Comment:

As per my view the article needs to be revision then it will be considered for further publication. The details are as follows

1. Material & method - Needs to be specific methods of disc diffusion anti microbial activity.
2. Figure - Crop the figure only focusing with petri-dishes.
3. Table - apply the statistical analysis for the zone of inhibition (e.g 12.00 \pm 1.2345 mean \pm S.D)
4. Table - Write the 0.00 instead of nil.
