

Editor's Comment:

I have reached to my decision, however the manuscript needs to be minor revision and the details are as follows.

"In the results part author(s) needs to be focus on the nanoparticles characterization because they claim for synthesis of zinc nanoparticles. Therefore authors need to be add UV graph of hydroxy citric acid and hydroxy citric acid mediated zinc nanoparticles; SEM or TEM, IR graph etc. Moreover th prove this zinc NPs characterization part is must then and then go for their biological activity.

As per my opinion the above said points needs to incorporated in revised form.
