

Editor's Comment:

After looking into the reviewer's comments, author feedback, and the revised manuscript 2020/MRJI/54322 titled "Isolation and Characterization of Carbonoclastic Bacteria Diversity in Oil-contaminated Soil in Cape Coast Metropolis, Ghana", I can say that authors have revised the manuscript properly after considering reviewer's comments. The work done is important and suitable for Microbiology Research Journal International. The finally revised manuscript has improved a lot. Thus in my opinion it may be accepted please.
