

**Editor's Comment:**

The authors improved the quality of the manuscript after addressing the reviewer comments. But I am still suggesting minor changes for the paper before it's accepted for publication. The number of mathematical equations are not in order, the authors started with (1) - (4), but then the authors suddenly mentioned equation (83) which is described nowhere in "Step 2: The specific attenuation,  $\gamma_R$  (dB/km) for the frequency, polarization and rain rate of interest was computed using Recommendation ITU-R P.838 as given in equation (83)", and then the order became (97) - (100). The authors have to correct these before publication.
