PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The manuscript shows an alternative for the use of waste from the wood industry for the production of briquettes, with utility in cooking food. Similar studies have been developed in various parts of the world. Therefore, I consider that the present manuscript to be considered in such a prestigious journal should address the aspects suggested in the review. Although social factors can be considered, it is important to consider the technological and scientific aspects of forest products such as briquettes, which are not very clear in the manuscript. The methodology must be elaborated again considering the physical and mechanical factors of the briquettes, taking into account that brief reference is made to the results and conclusions.	
Minor REVISION comments		
Optional/General comments
