PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Compulsory REVISION comments	<p>After reading the paper I feel that the manuscript is of potential interest to the readership of this journal, but there are major issues that must be addressed before the article could be published:</p> <ul style="list-style-type: none"> /* The literature review should be more carefully synthesised and structured. The use of sub-headings and signposting would help the reader to follow the argument being developed through the paper. /* There does not appear to be an explicit theoretical framework - this makes it difficult to explain the differences between outcomes of the research groups. Currently the manuscript appears to be somewhat descriptive and a theoretical. /* The results section requires far greater organisation and structuring. The analysis is too general, and the reported results are somewhat selective. This section needs to be more carefully and systematically constructed. /* Further, the analysis and findings must be critical and interpretive rather than just descriptive. /* The final discussion and conclusion should make it clear how the findings contribute to new knowledge. /* The Methodology lacked suitable detail. /* Methodology of the central work is exposed appropriately. /* Research methodology based on research goals is poor on absent. /* The research/evaluation methodology is not justified, clear and appropriate (including ethical considerations / approval where appropriate) /* The academic writing needs work. /* The discussion should be more concise and the outcomes should be discussed in relation to the existing research. The language style of this section has to improve. /* Recommendations should also be given for practice and further research. /* Some references within the paper body are not correct. /* The paper must be correctly formatted according the journal format /* Similarity check with iTenticate revealed a similarity index of 9% which is considered appropriate. A maximum of around 60 quoted words is accepted per paper. There is one paper with over 60 words. No previously copyrighted material can be used. See the attachment file with the plagiarism check results. /* In preparing a revised manuscript, please also include a table of how you have responded to each of the issues listed above point by point. <p>I look forward to receiving your revised manuscript in the near future.</p>	
Minor REVISION comments		
Optional/General comments
