**PART 1: Review Comments**

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments		
<b>Minor</b> REVISION comments	<p>Congratulations to the authors for a well written case report and relevant literature search. I found the report methodical and interesting. Couple of minor issues:</p> <ol style="list-style-type: none"> <li>1) There are some acronyms without full forms stated anywhere in the manuscript eg PPD</li> <li>2) Might be prudent to use generic names of druge eg levoquin</li> <li>3) There are too many references for a case report. Suggest shortening the list to only recent very relevant papers</li> <li>4) The tables present mostly data already described in the text. May be prudent to make them more concise and showcase data not already presented elsewhere.</li> <li>5) The figures need better illustration. This especially applies to the Figure 2. The pictures of the CT scans are small, unclear and findings are impossible to appreciate. Suggest to have smaller number of well annotated pictures with clearly discernable findings.</li> </ol>	
<b>Optional/General</b> comments
