The variable "d" distance of a bar to the column face is better replaced by "l", because it maybe confuse with diameter of a FRP bar and the "d" in Eqs (1) and (11). 3. It is better to give a flow chart for calculation results in Table 4 used with Eqs (1) to (11). 4. All of the variable should be written in italic, and the super- and sub-scripts in normal, expect who has a special physical meaning. 5. There are some spelling mistakes, such as in Line 11 "NSN" and Line 174 "ere", in Fig. 9 "KN" and in Table 3 "KN", etc. 6. All of the references should be given detailed information.
