PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	None.	
Minor REVISION comments	1. Most of the information were included in the figures. However, more figures would make things easier for such rich descriptive manuscript (example, basal flaser bedding as sedimentary facies associations can be described in more figures).	
Optional/General comments	<ol style="list-style-type: none"> Evaluation, characterization were mentioned in the abstract as the main objective of the manuscript. However, the title doesn't clearly reflect the objective for that. How the data was obtained is clear in the manuscript, as well as the methodology is properly described. The overall quality is acceptable. I believe that the abstract offered the reader a short understanding, meanwhile the introduction included enough information about the conducted research that prompted the study. How the data was obtained is clear in the manuscript, as well as the methodology is properly described. The overall quality is acceptable.
