PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>This article proposes the Interoperable and Distributed Processing in GIS to sustain the development of Local Authorities in Mali.</p> <p>The article is very interesting, and although it is not very extensive it is substantial.</p> <p>In this document it is highlighted as the web services model of the gis systems described provides to the user, the services and data they need, without having to install, learn, or pay for any unused functionalities. The use of such service holds many advantages for municipalities in terms of required qualification of users, cost of software, efficiency of workflows and decision-making.</p> <p>In order to benefit from the use of GIS in Mali a standardization of geographic information management is a necessity. The extension of this standardization in all ECOWAS countries would be a great advantage regarding the sharing of geographic information between countries.</p>	
Minor REVISION comments	<p>It is recommended to incorporate more recent bibliography.</p>	
Optional/General comments	<p>I recommend the document for publication.</p>
