SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>The method seems a little bit subjective, since all the end users are not able to give an objective notice about columns, beams, slabs and walls.</p> <p>The walls are affected with a coefficient zero "0", or it is well known they play an important role in case of seismic event particularly in RC buildings.</p>	
Minor REVISION comments	<p>In page 5 : Local Condition Rating (LCR) -How were determined the values that can be taken by B1, K1, K2, K3 and K4? - In the formula of LCR How was found the value 72?</p> <p>Global condition Rating (GCR) How was found the value 2.6?</p> <p>In page 7 In Table 3, what was the meaning of "f" and how was computed the "Weighted Mean" (Give an example)?</p> <p>In Page 8 Give photos (plans) and description about buildings under study</p> <p>In Table 4, give the signification of "CAFNR", "CBA", "COED", "CL", "CN" and "CS"</p> <p>In Table 4, "C" is the same for all structures, can you explain why? "B" is also the same for all buildings except for "CN" can you give an explanation. Give an example of calculation</p> <p>In page 9 How many times considered structures have survived calamities? And how intensity was these calamities? And which kind of calamities they were?</p>	
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
